This was the point [Ex. 6 - Personal Privacy] was making on the Harvard information I sent you last week.

Thanks Rich. Finally got chance to browse thru the rad results this morning. Seems that the results for gross alpha, gross beta, Ra-226, and Ra-228 are typically in single digit picocuries per liter. Interesting how the analysis sent for using wastewater on public roads (Harvard letter) had tens of thousands of picocuries per liter, yet no PADEP problem?

Here's the Rad data.

Will call sometime later on. Have to run now.

Rich
